2026 PLANT CATALOG AND PRICE LIST

A NOTE TO OUR CUSTOMERS:

The following is a list of plants that Broadway Gardens expects to have in stock for the season. Customers should be aware that certain selections may not be available due to excess demand, crop failure, disruptions in supplier availability, or other unforeseen events. **Prices are subject to change without notice. Availability of plant selections varies. Certain selections may be out of stock.**

The information provided herein regarding specific plant heights, zone hardiness, etc. was gleaned from the observations of several growers and botanical authorities. However, we have sometimes found considerable disagreement among authorities, particularly regarding plant heights and zone hardiness for some species and cultivars which can be significantly influenced by such factors as variables in climate (and microclimates), soils, rainfall, irrigation and fertilization practices. Therefore, all information provided should be considered as estimates or averages and used as only a general guide. Do not be surprised if the performance of a plant in your garden deviates somewhat from what we have described. In fact, we would appreciate hearing what your experiences and observations are or have been regarding such issues with particular plants.

FOR RETAIL LOCATIONS ONLY:

This price list does not correspond to the [bgperennials.com](https://www.bgperennials.com) online store. Certain plants may be available for online purchase, and the online prices may vary from our retail

NATIVE PLANTS ARE MARKED WITH A STAR *

PERENNIALS

VIOLA	<i>Etain, Purple Showers</i>

DEER RESISTANCE

Deer will sample almost anything, especially in the spring and late fall. Plants can only be considered deer resistant, not deer proof. Deer rely on their sense of smell to determine what to eat, and will always investigate freshly dug dirt. A wide variety of strong odors, especially with any new plantings, might confuse deer enough to cause them to leave your area to investigate elsewhere. There are no guarantees about what deer may or may not eat.

<i>Rosa</i>		

COMMON PESTICIDES THAT CAN BE TOXIC TO BEES

Pesticides that can be toxic to bees should be used cautiously to minimize adverse impact on plant pollination.

<i>Spinosad</i>	<i>Pyrethrums</i>	<i>Horticultural oil</i>
<i>Insecticidal soaps</i>	<i>Copper sulfate (fungicide)</i>	<i>Neonicotinoids</i>

GUIDE TO PLANT POLINATORS

METHODS TO MINIMIZE PESTICIDE IMPACT ON POLLINATORS

SET ACTIONS THRESHOLDS: Decide at what point pest populations or conditions require action.

MONITOR AND IDENTIFY PESTS: Identify pests and their risk accurately in order to take appropriate action when thresholds are reached.

...

PREVENTION: Control pests before they become a problem through proper maintenance and sanitation.

Use as little pesticides as needed.

Identify and confirm hive locations.

Don't forget to check for native bee nesting (along ground) and foraging sites.

Maintain appropriate buffers between treated areas and pollinator habitat.

Check with your state agriculture department or the pesticide regulation department for hives that might be located in your area.

Select insecticides that have the lowest toxicity rating to bees whenever possible. (Organic does not necessarily mean Bee Safe! Many of the popular organic pesticides are just as toxic, if not more toxic, to bees as some of the lower strength Neonicotinoids)

Spraying just about any type of herbicide/ pesticide on bee foraging sites in the middle of a warm sunny day will kill a large amount of bees.

Do not apply insecticides to blooming plants, including weeds, which have long residual toxicity to bees.

Do not apply insecticides when unusually low or high temperatures or dew are in the forecast.

Only apply pesticides after 4pm or early evening when bees are less active.

Do not spray bee toxic pesticides on pollinator plants in bloom or near bloom!

Do not use Neonicotinoid drenches or high concentration sprays on bee attracting plants ever!

Do not use grub controls on lawn when clover is in bud or bloom.

Consult the Xerces Society website at www.xerces.org for comprehensive information on pollinators.

PLANTS POISONOUS TO ANIMALS

The following list contains plants that have been reported to have systemic effects on animals and/or intense effects on the gastrointestinal tract. This is not a comprehensive list, but a compilation of the most frequently encountered plants. You should contact your veterinarian for consultation and/or treatment if your pet has ingested poisonous plant matter.

PLANTS POISONOUS TO HUMANS

These plants are considered toxic to humans and contain a wide variety of poisons. Symptoms may vary from mild to fatal. Contact the local Poison Center for more specific information on these or other plants that may not be on this list. Many other plants not listed here will cause Dermatitis (skin rash). Exercise caution when using these plants around children and pets! NOTE: Plants marked in bold are known to have caused human fatalities. This is not a comprehensive list, but a compilation of the most frequently encountered plants.
